The needs of families and climatic conditions have contributed to the structural styles of homes.

1. List the 3 major factors that the study of architecture includes.

Skill in drawing techniques, sensitivity to design, knowledge of the latest construction materials.

2. Which of the following factors lead to the name saltbox for the particular style home?
   B. the containers in village stores
3. What are the three main advantages of the architectural design of the garrison style house?
   #1 the separate corner posts on each floor make it possible to use shorter stronger posts

   #2 Th short straight lines provide economy and framing materials

   #3 extra space is added to the second level by overhang at very little extra cost.
4. What are the outstanding architectural features in the southern colonial home

The front colonnade and the giant portico.

5. What is unique about the shape of the roof on the gambrel style home.

The roof where the pitch is abruptly changed between the ridge and the eves.

6. Why do the terms contemporary and modern not describe a particular architectural style?
   There are many different architectural designs that can be contemporary or modern.
7. The basic ranch home is a low, long one story house with a low pitched roof and overhanging eves.
8. Name 2 factors that have probably contributed most to the development of modern or futuristic homes.

9. List four factors that appear to be influencing new trends in architectural design.
10. A style that combines traditional and contemporary influences is called a post modern.
11. A xanadomed structure is made from fiber glass skin wedges

Chapter 2

1. List the four basic residential home designs

1 story, 1.5 story, 2 story, split level

2. Identify five advantages of a ranch style house

Beautiful indoor to outdoor living. The absence of stairs. The outdoor maintenance is easy due to a low-pitched roof. Simplifies construction. The low and long appearance is pleasing.

3. Identify five disadvantages of a ranch style house

More costly to build. Requires more roof area and foundation length. Requires a larger lot. Maintenance costs will be more due to larger roof. Costs more to heat the house.

4. A one and a half story house may be recognized by its steeper roof and dormers
5. The one and one and a half story houses have two distinct advantages, economy in cost per unit, and built in expandability.
6. One of the most economical houses to build is a two story design
7. List four negatives about a to story house

General maintenance is usually more difficult. It does not lend itself to variations in style. It can appear out of place. Harder to cool the upstairs.

8. The split level design was conceived for a sloping hilly lot.
9. List the four levels of a split level.
   Basement, intermediate, living, sleeping area and bath
10. List three variations of a split level.
    Side by side, front to back, back to front
11. What are the main advantages of a ranch type home?
    It is a functional plan for graphic circulation
12. Why are dormers usually added to the one and a half story houses
    To provide additional light and ventilation
13. In a split level house the basement usually equals what percentage of space occupied by the house?
    40 – 60%
14. What house design looks like a two story from the front and a ranch from the rear?
    Split level

Chapter 3

1. List 11 factors with respect to the house size and arrangement of rooms that should be considered when planning a residential structure
   1) Is the community a planned community 2) are the homes in this community the price range of the proposed house 3) are the neighbors in the same socio-economic category of the prospective owner 4) is the community alive and growing or is it run down and dying 5) does the community have room for growth or is it restricted 6) are the residents in the community people who take pride in their homes or seem indifferent to them 7) does the community have modern churches, quality schools, and shopping areas 8) is there fire protection, water, sewer, natural gas, and garbage collection available 9) is the site near the prospected owners workplace 10) is public transportation available in the community 11) does the community have a high rate of turnover due to resale of homes?
2. The document that lists any legal claims against the property is called a title
3. The document that shows any restrictions or easements to the property is called the deed
4. List eight site features that are fount on a topographical drawing of the site
   1) Slope
   2) contour
   3) size
   4) shape
   5) elevation
   6) trees
   7) rocks
   8) soil conditions
5. If a home is to have its own septic system and water supply the lot should be at least one acre
6. What determines whether or not a house is functional
   The style of the family that's lives in it
7. List ten individual and family activities which should be provided in a house
   1) Preparing food
   2) Sleeping
   3) Working
   4) Bathing

5) Entertainment
6) Hobbies
7) Laundering
8) Working
9) Housekeeping
10) studying

8. Why should one plan a house using modular sizes
   To see if the parts fit together and form a whole
9. Exterior walls should be in modular lengths of two or four feet
10. List the drawings which are ordinarily included in a set of residential house plans
    Plot plan, foundation plan, floor plan, elevations, electrical plan, construction details, roof plan, roof framing plan, floor framing plan, heating and cooling plan, plumbing plan, landscaping plan, furniture plan, expansion plan.
11. Why should a title search be made before purchasing a lot?
    To make sure there have been no legal claims against the property
12. The measure of success of an architect in designing a house is
    The happiness of the customer
13. The cost of a site as a percentage of the total cost of a house will depend on the
    needed improvements on the site such as grading, fill, tree removal, and drainage

Chapter 4

1. The three principal views in orthopractic projections are the top, front, and right side views
2. The most important view or plan in a set of architecture drawings is the floor plan
3. To erase accurately use an eraser that will remove all traces of lead without destroying the surface of the paper and without leaving color marks
4. Drafting paper is produced in standard sizes or dimensions of "B" size paper are 11x17 or 12x18
5. A newer piece of drafting equipment which replaces the T square but not triangles is the straight edge
6. The two triangles most used in architectural drawings are the 40 and 30-60 triangles
7. The most accurate measurement possible with a common drafting protractor is half a degree
8. A scale that is divided in two 10,20,30,40,50, and 60 parts to the inch is called an engineer scale

9. If a drawing is half as large as the project then the scale is ½ = 1-0
10. If a quarter inch on the drawing = one foot on the object the scale is 1-4
11. Other than the scale, the instrument that is used to divide the length into proportional parts is the dividers
12. The instrument used to draw circles and arcs is the compass
13. Guidelines may be drawn with a pencil using a lettering guide
14. The purpose of a drawing is to accurately convey ideas
15. The boarder line is the widest line on the drawing and provides a finished look
16. Visible lines are also called object lines
17. Lines that are not visible are hidden lines
18. Lines that are used to indicate lengths of a line or edge are called dimension lines
19. A number H pencil is usually used for lettering on an architectural drawing
20. Architectural lettering is different from mechanical lettering it is more like an artwork
21. Space between letters and a word is not a constant
22. Lettering on an architectural drawing are generally 1/8 of an inch or 3/32 of an ich high
23. Symbols of an architectural drawing may be traced using templates, underlays, and overlays
24. Symbols may be attached to the surface of a drawing using what five devices

Drafting tapes, transfer type, stencil lettering guides, lettering machines, photo or scissor drafting

25. what is the purpose of a CAD system?

To completely replace the equipment used by a traditional drafter to an online system

26. List three components of a computer processor

Data processing unit, control section, transfer mechanism

27. What is the purpose of a CAD software

A computer program designed for specific application

28. What type of CAD package would be best for the design of a residential structure?

AEC package

29. What type of hard copy output device is most popular for architectural applications
A pen plotter
